Water intake Trail

Trail 5

Walking/ Hiking Only
Walking Time: 4 hrs
Difficulty Level: Medium
Shade Cover: 80%

From Lodge, head up upstream along Makata Stream. Pass through a small area of Mulanje Cedar trees. Stream fringes has lots of mango trees, so good for primates and birds along this route. From the rest area at the water intake point, those who'd like a bit more, head up the hills to a wonderful viewpoint [Kauziuzi outcrop] where are able to see Lilongwe and State House. From the viewpoint descend on a good track to the road and back to the Lodge.

This trail heads through the only area where a few Mulanje cedar trees are found. There is a possibility of spotting common duiker and primates due to a prevalence of Mango trees , following a permanent water course with good forest birds and others bird species such as Miombo Rock Thrush, Pennant Winged Nightjar, Green Capped
